

Local-first. Always on. GDPR by design.

What TreeTalk Node Does

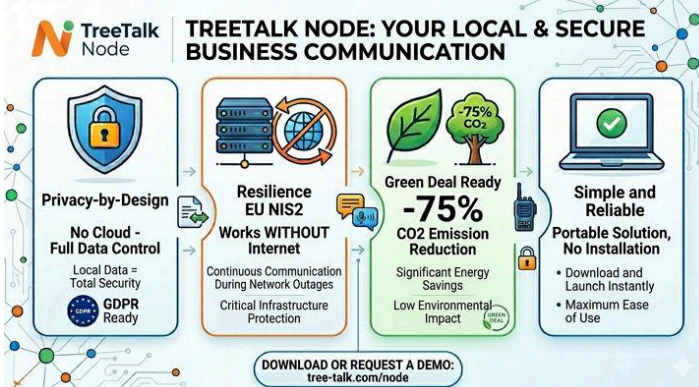

TreeTalk Node is a serverless, local-first collaboration platform for professional teams. Staff share files up to 55GB, send encrypted text and voice messages, and coordinate work directly over the office WiFi, LAN, or VPN — with no cloud infrastructure, no internet dependency, and no external servers involved. One small executable file: no installation, no registration, just run and go.

Think of it as "WhatsApp meets Dropbox" — but without any data ever leaving your office network.

The Problem for Accounting and Consulting Firms

Professional services firms handle some of the most sensitive data in existence — tax records, financial statements, audit files, legal opinions, strategic plans. The tools most teams rely on for day-to-day collaboration were not designed with this responsibility in mind:

- Sending client documents by email or through cloud storage services routes confidential data through external servers, creating GDPR exposure and potential liability every time a file is shared.
- Consumer-grade messaging apps — WhatsApp, Telegram, even Microsoft Teams — store message data and metadata on third-party infrastructure. For privileged professional communications, this is a structural compliance risk.
- Cloud tools offer policy-based privacy, not architectural privacy. When the policy changes, or the provider is breached, your clients' data is at risk. The only defensible position is data that never leaves your premises in the first place.
- During internet outages — which happen without warning — cloud-dependent teams lose the ability to communicate and share files entirely. Work stops.
- Junior staff, interns, and external collaborators often need to exchange working drafts and receive feedback without being granted access to the firm's main document management system. There is currently no clean, compliant way to do this.

TREETALK NODE: YOUR LOCAL & SECURE BUSINESS COMMUNICATION

- Privacy-by-Design**
 No Cloud - Full Data Control
 Local Data = Total Security
 GDPR Ready
- Resilience**
 EU NIS2
 Works WITHOUT Internet
 Continuous Communication During Network Outages
 Critical Infrastructure Protection
- Green Deal Ready**
 -75% CO2 Emission Reduction
 Significant Energy Savings
 Low Environmental Impact
- Simple and Reliable**
 Portable Solution, No Installation
 • Download and Launch Instantly
 • Maximum Ease of Use

How TreeTalk Node Works in a Professional Services Office

Scenario 1: Confidential Document Workflow

A senior accountant needs to share a client's draft financial statements with a colleague for review before the client meeting. With TreeTalk Node, the file transfers directly between their workstations over the office network in seconds — no upload to Google Drive, no email attachment, no data leaving the building. The client's information never touches an external server.

Scenario 2: Junior Staff and External Collaborators

A new trainee is preparing a first draft of a tax return. They are not yet granted access to the firm's main client management system. With TreeTalk Node, they submit their working draft directly to their supervisor for review over the local network — securely, without email, without cloud storage, and without any risk of the document being intercepted or indexed by an external service.

Scenario 3: Instant Internal Communication

The reception desk needs to let a partner know that an important client has arrived for their appointment. Instead of calling the office phone or using a consumer messaging app, they send an instant encrypted voice message over the local network via TreeTalk Node. It arrives in seconds, leaves no external trace, and requires no phone number or account.

Scenario 4: Firm-Wide Announcements

The managing partner needs to share an urgent internal memo with all staff simultaneously — a policy update, a scheduling change, or a sensitive client matter requiring immediate attention. TreeTalk Node delivers the message, document, or voice note to every team member in the office instantly as a group broadcast, without routing anything through external infrastructure.

Three Compliance Pillars — Solved in One Tool

Privacy GDPR by Design	Resilience NIS2-Ready	Sustainability Green Deal-Ready
----------------------------------	---------------------------------	---

How TreeTalk Node Compares

	TreeTalk Node	Cloud Tools	Email / USB
Client data stays on-premises	Yes	No	Risky

GDPR-compliant by design	Yes	No	No
Works without internet	Yes	No	Partial
Encrypted messaging + voice	Yes	Partial	No
Zero infrastructure cost	Yes	Yes	Yes
Instant deployment	Yes	Yes	Yes

Key Benefits for Your Firm

- Client confidentiality protected by architecture — not just by policy or terms of service
- GDPR compliance achieved without additional processes, audits, or staff training
- Privileged internal communications remain genuinely private — no third-party metadata collection
- Junior staff and external collaborators can exchange working documents securely without system access
- Full operational continuity during internet outages — work does not stop when the connection does
- Zero IT infrastructure investment — one executable file, deployed in minutes on any Windows device
- Free to download and test — no commitment, no registration, no credit card
